

IN THE CLAIMS:

Please amend the claims as shown below. The claims, as pending in the subject application, read as follows:

1. (Currently Amended) An information processing apparatus for monitoring a job requested of a device on a network, comprising:
 - ~~a first receiving unit adapted to receive first information indicating a status of a job requested of said device;~~
 - ~~a second receiving unit adapted to receive second information indicating a location of said device; and~~
 - a first transmitting unit adapted to transmit a job to a device connected to the information processing apparatus through a network;
 - a second transmitting unit adapted to transmit to said device event information of an event relating to the job that is to be notified by said device to said information processing apparatus;
 - a receiving unit adapted to receive event notification information of the event from said device; and
 - a display unit adapted to display information indicating said device and the received event notification information on a map for displaying the a location of said device on the basis of the second information;
 - ~~wherein said display unit displays the information indicating said device and the first information concerning said device.~~

2. (Previously Presented) An information processing apparatus according to claim 1, further comprising a storing unit adapted to store map data for displaying the location of said device,

wherein, said display unit displays the information indicating said device on the map displayed based on the map data.

3. (Currently Amended) An information processing apparatus according to claim 1, wherein, said display unit changes a display status of the information indicating said device according to the first information a content of the received event notification information.

4. (Currently Amended) An information processing apparatus according to claim 1, further comprising a third second receiving unit adapted to receive map data for displaying the location of said device from another information processing apparatus on said network,

wherein, said display unit displays the information indicating said device on the map displayed based on the map data received by said third second receiving unit.

5. (Currently Amended) An information processing apparatus according to claim 1, further comprising a storing unit adapted to store map data corresponding to plural hierarchical location information for displaying the location of said device,

wherein, said display unit displays the information indicating said device on the map displayed based on the map data received based on the second information.

6. (Currently Amended) An information processing apparatus according to claim 1, wherein, said display unit displays the information indicating said device and the ~~first information concerning said device~~ event notification information on a same screen.

7. (Canceled)

8. (Currently Amended) A device for processing a job requested from an information processing apparatus via a network, comprising:

a first storing unit adapted to store display location information on a map for displaying a location of said device;

~~a second storing unit adapted to store an event to be notified regarding the requested job and a notice destination address being associated with the event to be notified; and~~

a receiving unit adapted to receive from said information processing apparatus event information of an event relating to the requested job that is to be notified to said information processing apparatus; and

a transmission unit adapted to transmit event notification information and said display location information to said information processing apparatus indicating the event to be notified and the information stored in said first storing unit to said notice destination address, according to an occurrence of said event.

9. (Currently Amended) A device for processing a job requested via a network, comprising:

a storing unit adapted to store display location information on a map for displaying a location of said device;

a judgment unit adapted to judge a status of the requested job; and

a transmission unit adapted to transmit, according to a request from another device an information processing apparatus on said network, information indicating the judged job status and the display location information stored by said storing unit to said another device information processing apparatus.

10. (Currently Amended) A system having a device for processing a job requested from an information processing apparatus via a network and an said information processing apparatus for monitoring the requested job:

said device comprising:

a first storing unit adapted to store display location information on a map for displaying a location of said device;

~~a second storing unit adapted to store an event to be notified regarding said the requested job and a notice destination address being associated with the event to be notified; and~~

a receiving unit adapted to receive from said information processing apparatus event information of an event relating to the requested job that is to be notified to said information processing apparatus; and

a transmission unit adapted to transmit event notification information and said display location information to said information processing apparatus indicating the event to be notified and the information stored in said first storing unit to said notice destination address, according to an occurrence of said event; and

said information processing apparatus comprising:

a receiving unit adapted to receive the event notification information ~~indicating said event~~ and the display location information ~~stored in said first storing unit~~ transmitted by the transmission unit of said device; and

a display unit adapted to display the location information ~~indicating of~~ said device and the event notification information ~~indicating said event~~ on the map for displaying the location of said device.

11. (Currently Amended) A system having a device for processing a job requested from an information processing apparatus via a network and ~~an~~ said information processing apparatus for monitoring the requested job:

said device comprising:

a ~~first~~ storing unit adapted to store display location information on a map for displaying a location of said device;

a judgment unit adapted to judge a status of said requested job; and

a transmission unit adapted to transmit information indicating said judged job status and the display location information ~~stored in said first storing unit~~ to another said information processing apparatus, according to a request from said another information processing apparatus on said network; and

said information processing apparatus comprising:

a receiving unit adapted to receive the information indicating said judged job status and the display location information ~~stored in said first storing unit~~ transmitted from said device; and

a display unit adapted to display the location information indicating of said device and the information indicating said judged job status on the map for ~~displaying the location of said device.~~

12. (Currently Amended) An information processing method of ~~monitoring a job requested of a device on a network~~ of an information processing apparatus, comprising the steps of:

~~a first receiving step of receiving first information indicating a status of said job requested of said device;~~

~~a second receiving step of receiving second information indicating a location of said device; and~~

a first transmitting step of transmitting a job to a device connected to the information processing apparatus through a network;

a second transmitting step of transmitting to said device event information of an event relating to the job that is to be notified by the device to the information processing apparatus;

a receiving step of receiving event notification information of the event from the device; and

a display step of displaying information indicating said device and the received event notification information on a map for displaying the a location of said device ~~on the basis of the second information;~~

~~wherein, the display step displays the information indicating the device and the first information concerning the device.~~

13. (Previously Presented) An information processing method according to claim 12, further comprising the step of storing map data for displaying the location of the device,

wherein, the display step displays the information indicating the device on the map displayed based on the map data.

14. (Currently Amended) An information processing method according to claim 12, wherein, said display step changes a display status of the information indicating the device according to the first information a content of the received event notification information.

15. (Currently Amended) An information processing method according to claim 12, further comprising ~~the step of a third~~ a second receiving step of receiving map data for displaying the location of the device from another information processing apparatus on said network,

wherein, said display step displays the information indicating the device on the map displayed based on the map data received by the ~~third~~ second receiving step.

16. (Currently Amended) An information processing method according to claim 12, further comprising a storing step of storing map data corresponding to plural hierarchical location information for displaying the location of the device,

wherein, the display step displays the information indicating the device on the map displayed based on the map data ~~received based on the second information~~.

17. (Currently Amended) An information processing method according to claim 12, wherein, the display step displays the information indicating the device and the ~~first information concerning the device~~ event notification information on a same screen.

18. (Canceled)

19. (Currently Amended) A device control method of processing a requested job from an information processing apparatus via a network, comprising the steps of:

a first storing step of storing display location information on a map for displaying a location of the device;

~~a second storing step of storing an event to be notified regarding the requested job and its a notice destination address being associated with the event to be notified; and~~

a receiving step of receiving from said information processing apparatus event information of an event relating to the requested job that is to be notified to said information processing apparatus; and

a transmitting step of transmitting event notification information and the display location information to said information processing apparatus indicating the event to be notified and the information stored in the first storing step to said notice destination address at an occurrence of said event.

20. (Currently Amended) A device control method for processing a requested job via a network, comprising the steps of:

storing display location information on a map for displaying a location of said device;

judging a status of said requested job; and

transmitting, according to a request from ~~another device~~ an information processing apparatus on the network, information indicating said judged job status and the display location information stored in the storing step to the ~~another device~~ information processing apparatus.

21. (Canceled)

22. (Canceled)

23. (Currently Amended) A storage medium storing a computer program to be executed by a computer of an information processing apparatus ~~for monitoring a job requested of a device on a network~~, said computer program comprising the steps of:

~~a first receiving step of receiving first information indicating a status of said job requested of said device;~~

~~a second receiving step of receiving second information indicating a location of said device; and~~

a first transmitting step of transmitting a job to a device connected to the information processing apparatus through a network;

a second transmitting step of transmitting to said device event information of an event relating to the job that is to be notified by said device to said information processing apparatus;

a receiving step of receiving event notification information of the event from said device; and

a display step of displaying information indicating the device and the received event notification information on a map for displaying ~~the~~ a location of the device on the basis of the second information;

~~wherein, the display step displays the information indicating the device and the first information concerning the device.~~

24. (Canceled)

25. (Currently Amended) A storage medium storing a computer program to be executed by a computer of a device for processing a job requested from an information processing apparatus via a network, said computer program comprising the steps of:

a first storing step of storing display location information on a map for displaying a location of said device;

~~a second storing step of storing an event to be notified regarding said requested job and a notice destination address being associated with the event to be notified; and~~

a receiving step of receiving from said information processing apparatus event information of an event relating to the requested job that is to be notified to said information processing apparatus; and

a transmitting step of transmitting event notification information and said display location information to said information processing apparatus indicating the event

~~to be notified and information stored in the first storing step to said notice destination~~
address, according to an occurrence of said event.

26. (Canceled)
